Data Visualization with Power BI and Tableau

Practical – 5

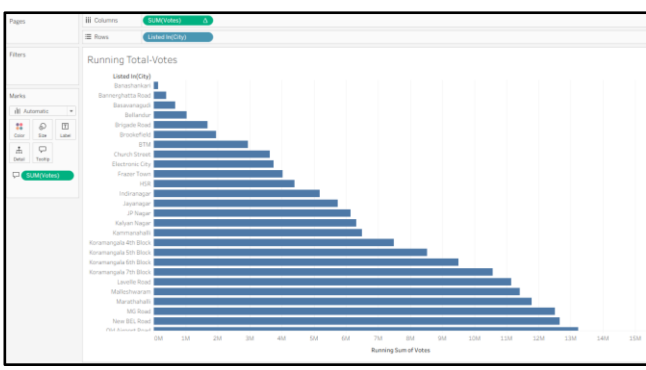
Roll No.: T050	Name:Aashu Yadav
Class:TYIT	Batch:1
Date of Assignment:21/08/2026	Date/Time of Submission:21/08/2026

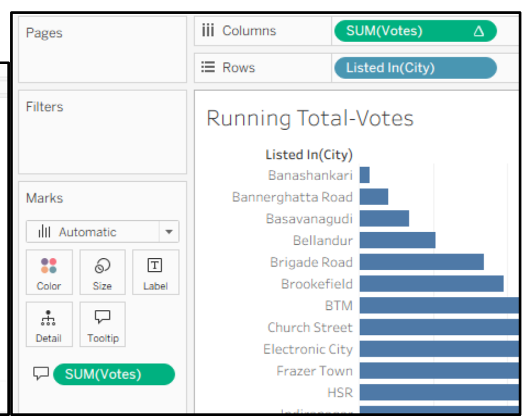
Part A – Program
Analyzing Data using Table Calculations in Tableau

Dataset: zomato.csv

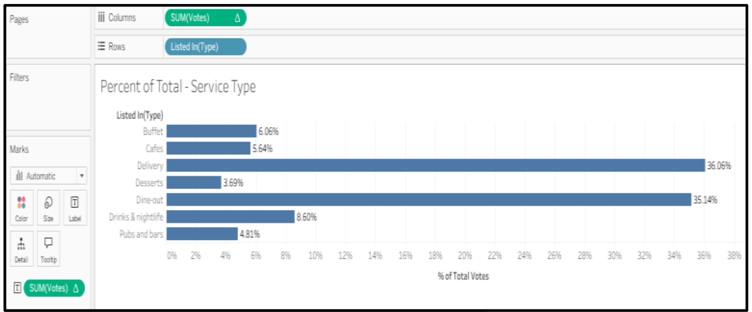
a) Apply Quick Table Calculations
Running Total and Percent of Total
Steps:

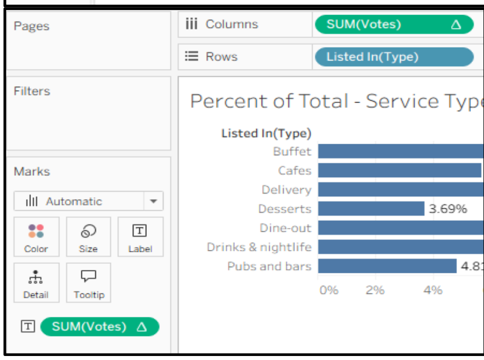
1. **Open the dataset in Tableau and create a worksheet.**
2. **Add the required measure to the view.**
3. **Right-click the measure → Quick Table Calculation.**
4. **Select Running Total or Percent of Total.**
5. **Check the result.**





Task : Create a Percent of Total across Categories



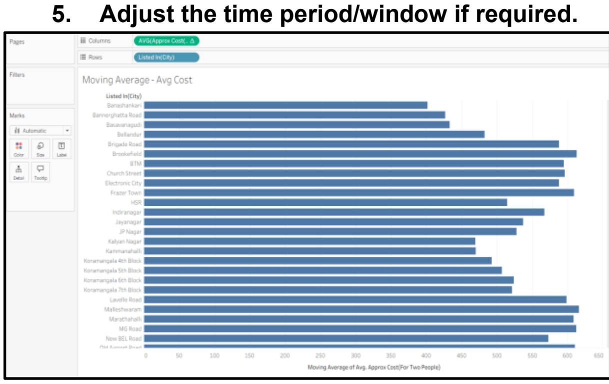


b) Create Moving Averages and Cumulative Metrics

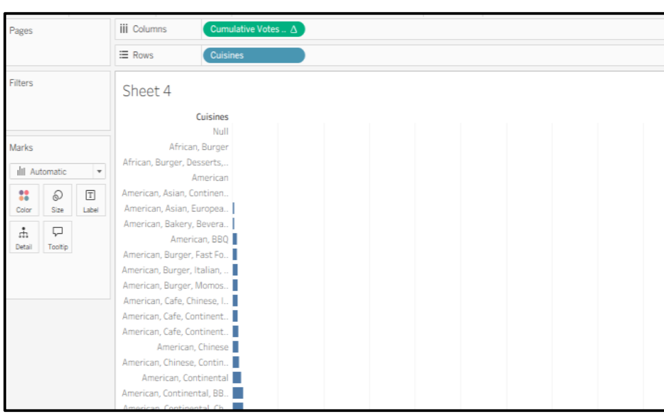
Task : Create a Moving Average Calculation

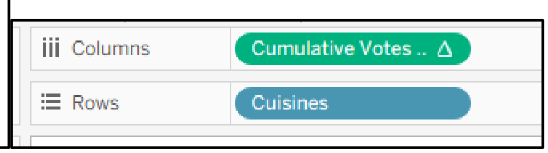
Steps:

1. **Add the required measure to the worksheet.**
2. **Right-click the measure.**
3. **Select Quick Table Calculation.**
4. **Choose Moving Average or a cumulative calculation.**
5. **Adjust the time period/window if required.**



Task : Create a Custom Cumulative Metric via Calculated Field





c) Perform Year-over-Year Growth Analysis

Task: Calculate Year-over-Year (YoY) / Period-over-Period Percent Growth

Steps:

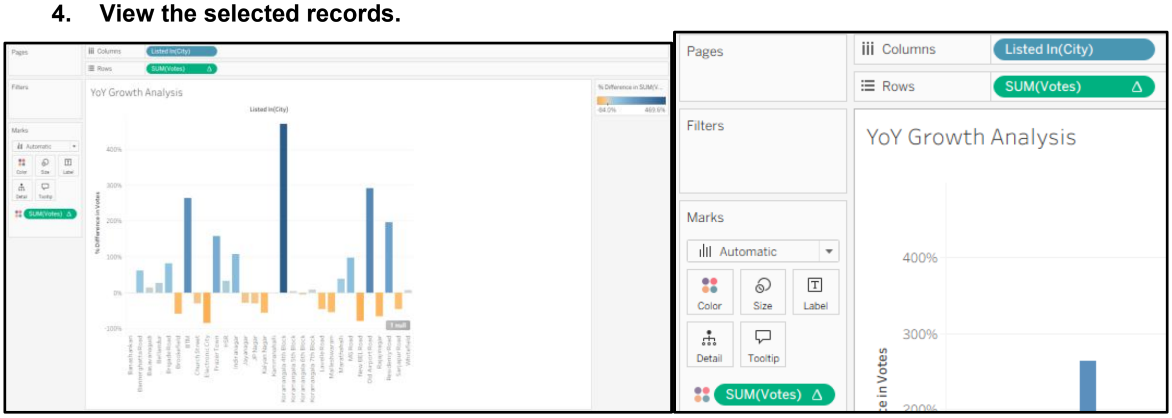
1. **Add Date and the required measure to the worksheet.**
2. **Right-click the measure.**
3. **Select Quick Table Calculation → Year over Year Growth.**
4. **Compare the current year with the previous year.**

d) Use Ranking Functions – Top N / Bottom N

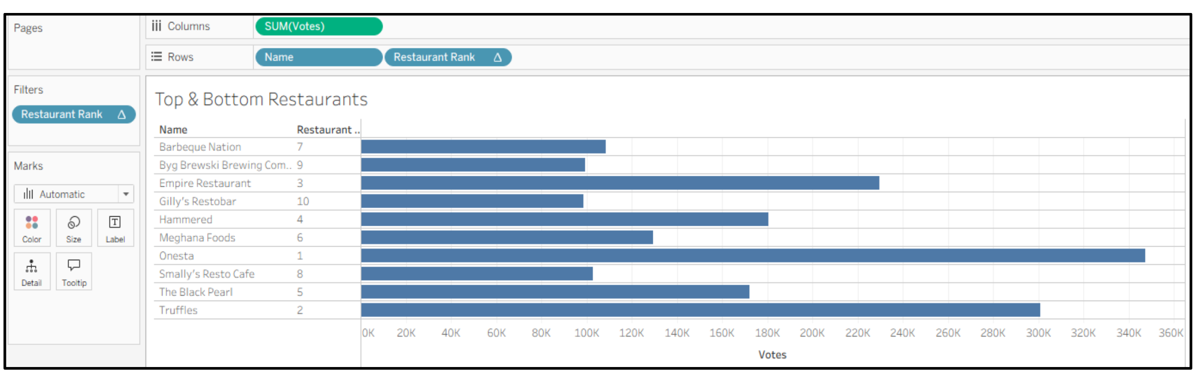
Task : Create a Rank Calculation

Steps:

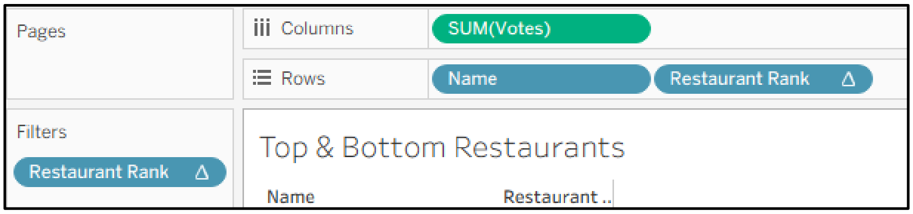
1. **Select the required dimension and measure.**
2. **Sort the values according to the measure.**
3. **Apply a Top N or Bottom N filter.**
4. **View the selected records.**



Task : Build the Top N / Bottom N Ranked View



Task : Filter Dynamically to Display Top N Only



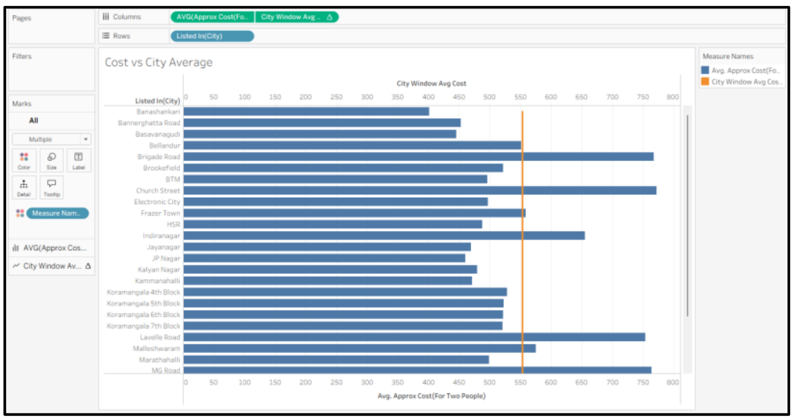
e) Implement Window Functions

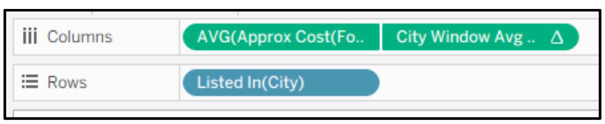
WINDOW_SUM and WINDOW_AVG

Steps:

1. **Create a calculated field.**
2. **Use WINDOW_SUM() or WINDOW_AVG().**
3. **Add the calculated field to the worksheet.**
4. **Check the result across the selected table window.**

Task : Build the Window Comparison Visualization

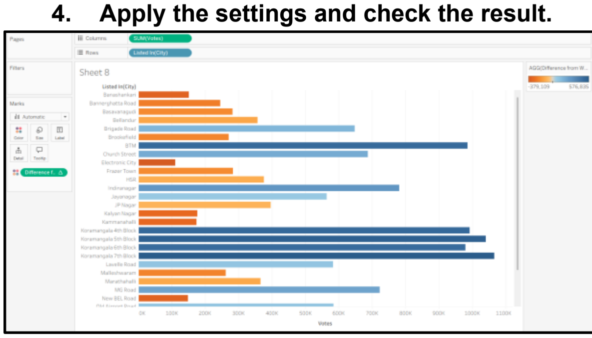


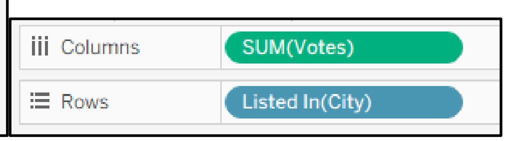


f) Customize Addressing and Partitioning

Steps:

1. **Open the Table Calculation settings.**
2. **Select the fields across which the calculation should run.**
3. **Select the fields that should restart the calculation.**
4. **Apply the settings and check the result.**





g) Create Dynamic Titles and Labels

Steps:

1. **Create a calculated field or table calculation.**
2. **Add the required value to the worksheet.**
3. **Use it in the Title/Label where applicable.**
4. **Format the title or label properly.**
