Data Visualization with Power BI and Tableau

Practical – 4

Roll No.: T050	Name:Aashu Yadav
Class:TYIT	Batch:1
Date of Assignment:20/08/2026	Date/Time of Submission:20/08/2026

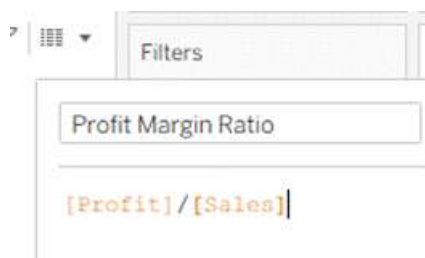

Aim:-

a) Create basic calculated fields using formulas

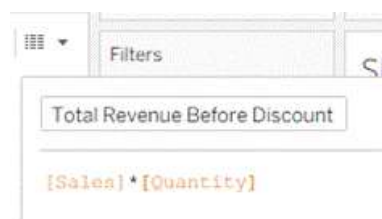

b) Perform row-level calculations

Steps:

1. Open tableau and click the text file and select the store_sales_data(2).csv
2. Click the sheet 1 and click the top search drop down and click the create calculate field and fill the .. and click ok

3. Drag the category of goods in row
4. Profit margin ratio in column and edit the average
5. Click new sheet -2
6. And repeat the process exactly to the sheet 1(step 2)

7. Drag the total revenue before discount in column and also drag the sales in column & and drag the product name in row.

c) Perform aggregate-level calculations

8. Click the new sheet 3
9. And repeat the same process like (step 2)

10. Drag the sub category in row and aggregate profit margin in column (and change in the average)

d) Implement FIXED Level of Detail (LOD) calculations

11. Click the new sheet 4
12. And repeat the same process like (step 2)

13. Drag state and sub category in row
14. Drag sales and fixed regional sales in column
15. Click the new sheet
16. And repeat the same process like (step 2)

17. Drag the state in row and drag the include sales per customer in column and change in average

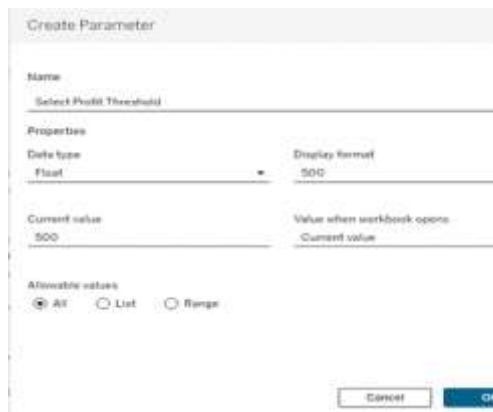

e) Use INCLUDE and EXCLUDE LOD expressions

18. Click the new sheet 6
19. Drag Category of Goods and sub category onto the Rows shelf.
20. Right-click in the blank white space of the Data Pane or Click the Small Triangle Icon next to the search bar and select Create Calculated Field...

f) Create and use parameters for dynamic analysis

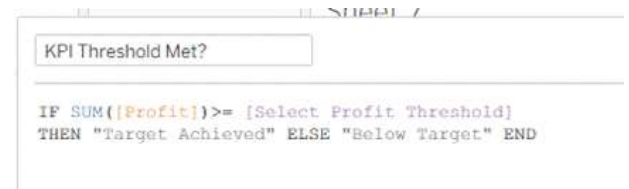

21. Click the new sheet 7
22. Go to your Data Pane. Click the small drop-down arrow (small triangle) next to the search bar at the top and choose Create Parameter.

This is subjective to dataset in our case we typed 3,75,00,000 and the color changed instantly).

23. Notice a new section titled Parameters appears at the bottom of your Data Pane, showcasing your new selector.
24. Right-click in the blank white space of the Data Pane or Click on the small triangle angle next to the search bar and select Create Calculated Field...
25. Name this field: KPI Threshold Met?.

26. Open a new blank worksheet.
27. Drag the State dimension from your Data Pane and drop it onto the Rows shelf.
28. Drag the Profit measure and drop it onto the Columns shelf.
29. Drag your newly created calculated field KPI Threshold Met? and drop it directly onto the Color tile in the Marks card.
30. Show the Parameter Control: Go down to the very bottom of the Data Pane under the Parameters header section. Right-click on your Select Profit Threshold parameter block and choose Show Parameter Control.

g) Apply calculations to fix data issues and enhance insights

31. Open a new blank worksheet. 8
32. Drag your newly created Standardized City Type dimension from the Data Pane and drop it onto the Rows shelf.
33. Drag the Cleaned Discount calculated field onto the Columns shelf. Change its aggregation from Sum to Average by right-clicking the pill.
